

This document gives a detailed-stepwise procedure to run the Sakshar Game Code and the requirement to be fulfilled prior running it.

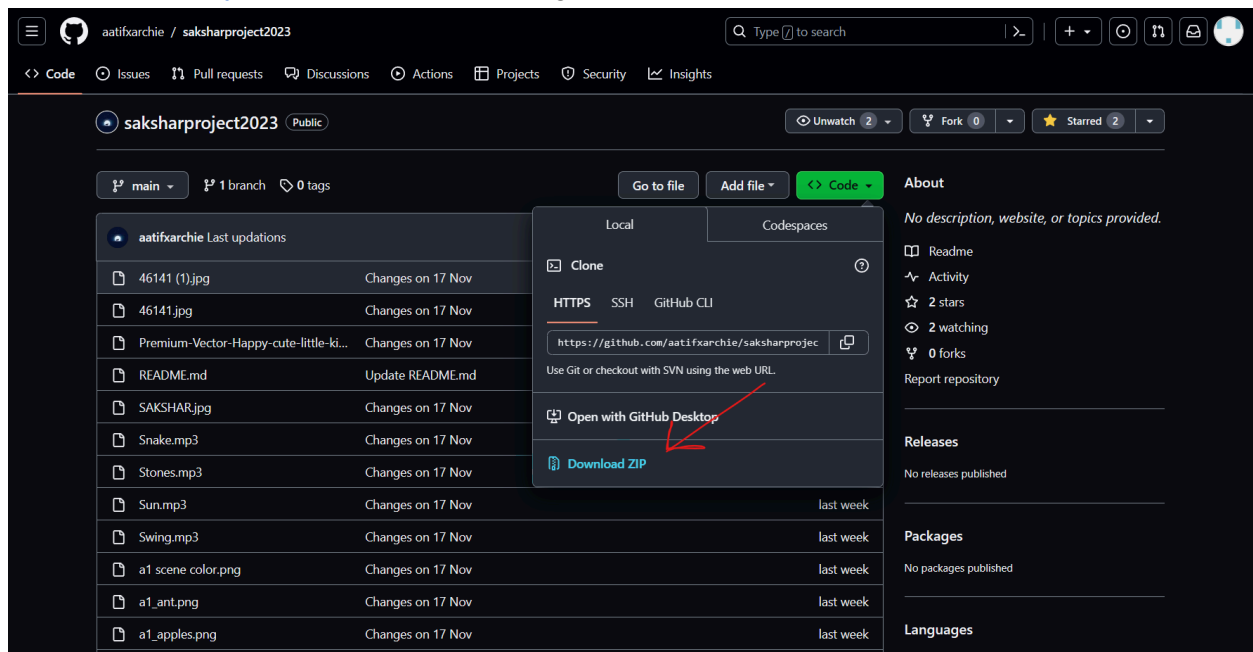

System Requirements

Windows 7 and above, RAM minimum 2 GB, In-Built/external microphone

Software Requirements

[Microsoft VS Code](#) (Hyperlink attached)

After fulfilling the above requirements, download the game code and supporting files from the [Github Repository](#) (Refer the attached image)

Now, after extracting the downloaded zip file, you will find a text file named “requirements.txt”, open it.

There, the required modules are mentioned which are required for running the game.

Open the command prompt now (as administrator).

Install the required modules one by one using the command `pip install "module name"`

Replace the “module name” with the respective module mentioned in the file.

After fulfilling all the above steps, open the downloaded folder in VS Code (Note: open the entire folder, not a single file)

In the VS Code, navigate to main.py file and run it, the game will start running on the system after a brief period (2-5 seconds). [Refer the VS Code Documentation for running the python file.](#)
